SNAPSHOT OF CIVIL REGISTRATION AND VITAL STATISTICS SYSTEMS OF UGANDA
Program Information

About the Centre of Excellence for CRVS Systems

Housed at the International Development Research Centre (IDRC), the Centre of Excellence for Civil Registration and Vital Statistics (CRVS) Systems is a global knowledge and resource hub that actively supports national efforts to develop, strengthen, and scale CRVS systems. It collaborates with organizations and experts to broker access to information and expertise, including global standards, tools, research evidence, and relevant good practice.

The Centre of Excellence was established with funding from Global Affairs Canada and IDRC and contributes directly to the work of the Global Financing Facility, a key financing platform of the UN Secretary General’s Global Strategy for Women’s, Children’s, and adolescents’ health.

About the International Development Research Centre (IDRC)

Part of Canada’s foreign affairs and development efforts, the IDRC invests in knowledge, innovation and solutions to improve the lives of people in the developing world. IDRC works with many stakeholders including civil society organizations, think tanks, regional organizations and government departments in the developing world to promote growth, reduce poverty, and drive large-scale positive change.

Introduction

The purpose of this report is to provide a brief introduction to the civil registration and vital statistics (CRVS) systems in Uganda.

The information was collected through a questionnaire completed by the National Identification and Registration Authority in January 2019 and supplemented by a desk review of available documents. The report presents country background, selected indicators relevant for CRVS improvement processes, stakeholders activities and resources available and needed to strengthen CRVS systems, coordination, among others.

Brief country profile

Uganda is a landlocked country in East Africa. It is bordered by South Sudan on the north, the Democratic Republic of the Congo in the east, Kenya on the west, and Rwanda and Tanzania in the south. Uganda is usually referred to as the Pearl of Africa. The White Nile originates in Uganda. The land area of Uganda is 241,550.7 square kilometres.\(^1\) The total population in 2019 was estimated at 40.3 million with an annual rate of natural increase of 3.1\(^2\). The population for selected years between 2015 to 2030 is given below in chart 1.\(^3\)

Figure 1. Uganda’s population projection, 2015-2030 (thousands)

- Capital city: Kampala
- Official working language: English
- Ministries responsible for civil registration: (i) Ministry of Internal Affairs; and (ii) Ministry of Justice and Constitutional Affairs.
- Civil registration agencies:
  - National Identification and Registration Authority (NIRA): Births and deaths registrations. NIRA is under the Ministry of Internal Affairs; and
  - Uganda Registration Services Bureau (URSB): Marriages and divorces registrations. URSB is an autonomous institution under the Ministry of Justice and Constitutional Affairs.
- National statistical office: Uganda Bureau of Statistics (UBoS)
## CRVS dimensions

### Births

Civil registration system

Legislative framework

The civil registration system in Uganda is governed by a number of legal instruments.

(i) Registration of births and deaths is governed by the Registration of Persons Act 2015. The Act provides for compulsory registration of births, deaths and national identification. The 2015 Act repealed the existing Births and Deaths Registration Act and transferred the registration of births and deaths function from the Uganda Registration Services Bureau (URSB) to the NIRA.

(ii) Marriage registration is mandated by the Marriage Act 1904; and Customary Marriage Registration Act (1973) Cap 248.

The Act on births and deaths is universal in its coverage as it covers all population groups in the country, including non-nationals and refugees. The definitions of births and deaths are also aligned with international recommendations.

Management, organization and operations

The Registration of Persons Act 2015 mandates NIRA to register births, deaths and adoptions as they occur and to register all persons in the country, and to issue National Identification Numbers for citizens and alien Identification Numbers for alien residents. The information gathered is used to establish and maintain a National Identification Register. URSB is responsible for licensing churches to celebrate marriages and solemnizing civil marriages.

National CRVS systems coordination mechanisms

The civil registration system improvement work is coordinated by a national task force which consists of the following members: Uganda Registration Services Bureau (URSB); Ministry of Justice and Constitutional Affairs; Ministry of Health; Ministry of Local Government; Ministry of Education and sports; Ministry of Gender and Labor and Social Development; National Planning Authority; Electoral Commission; Population Secretariat; and Development partners: United Nations Children’s Fund (UNICEF); World Health Organization (WHO); United Nations Population Fund (UNFPA); UNHCR; World Vision; and Plan International.

Administrative level registration centres

Uganda has 116 Districts; 200 Counties; 1,440 sub-Counties; 7,571 Parishes; and 57,858 Villages. The local civil registration offices for births and deaths are at the district levels. Currently, there are a total of 152 births and deaths registration offices throughout the country. Nineteen (14 per cent) of the total registration offices are located in urban areas and 133 (86 per cent) are in rural areas. For marriages, there are 2,095 service points in the country. Out of these, 133 service points are in urban areas where Marriage Registrars solemnize marriages; and 1,943 for customary marriages in rural areas.

Accessibility of civil registration services

Most households reside more than 10 kilometres from the nearest local registration office. It was estimated that it could take up to 4 hours for most service seekers to reach the nearest office. In some of the areas, the service points are so far that it could take up to 4 hours by car to reach it.
**Registration of vital events**

**Backlog of unregistered births**

Information not available from NIRA.
Interface with other sectors and operations

The Registration of Persons Act, 2015 provides the basis to harmonise and incorporate different systems into a national register of persons. A unique National Identification Number is issued by NIRA when a birth is registered linking the civil registration system. The civil registration and national identification systems are under NIRA but they are not currently electronically linked.

The health sector plays an important role in the notification of occurrence of births and deaths in health facilities, including providing causes of deaths. However, the link between NIRA, which registers births and deaths, and URSB, which registers marriages, is not clear.

Vital statistics system

This section provides a brief introduction to the collection and dissemination of vital statistics, including causes of death, from the civil registration system.

Vital statistics

The Uganda Bureau of Statistics Act 1998 states the Bureau is responsible for matters relating to which statistical information may be collected, compiled, analyzed, abstracted and published on different areas, including vital occurrences and mortality. It also mentions that UBOS is mandated to collect routine administrative statistics, which includes civil registration.18

The Registration of Persons Act of 2015 states that the register shall be used for statistical purposes, among others. However, it does not mention the collection, compilation and dissemination of vital statistics from the civil registration system. It should be noted that the Ugandan Bureau of Statistics (UBOS) is member of the board of NIRA.

UBOS collects, compiles and disseminates vital statistics from decennial population censuses and household surveys such as the Demographic and Health Survey every 5-years or so. The Bureau does not compile and disseminate vital statistics from civil registration.
Causes of death

Causes of death information is only collected and recorded for deaths occurring in health facilities. Medical officers are required by regulation to complete a NIRA cause of death form for deaths occurring in health facilities. According to NIRA, causes of death are coded according to the International Classification of Diseases (ICD) 10 format.

UBOS includes few causes of under-five health facility-based mortality data in its Annual Statistical Abstract.¹ The information is obtained from Ministry of Health.

At this stage, there is no initiative by NIRA or UBOS to implement a verbal autopsy procedure to determine probable causes of death for deaths occurring outside health facilities.

---

¹ The fields in the Form may be modified to deal with causes of deaths occurring outside a medical facility.
Digitization

Modernization of the CRVS systems was looked at in terms of computerization of the systems, introduction of mobile phones for notifications and other purposes as well as any other innovative approaches which countries shared.

Computerization

The registration of births and deaths in Uganda is paper-based at all of the lowest registration centres. At regional level, the information is entered into the national database. All local registration offices but only a few health facilities in the country have computers.

Electronic media, such as CDs, flash discs/sticks, are used to transfer civil registration information from local registration centres to the next higher level registration offices.

Mobile technology application

Mobile technology is being used for notification of occurrence of births. Mobile Vital Record System, developed with the help of UNICEF and Uganda Telecom in 2013, has enabled communities to notify, and subsequently register births. The system enables a mother living in a remote village to report a birth to a local government notifier, who then enters the information via mobile phone to the central database.

Source: Questionnaire completed by NIRA

Improvement initiatives and external support

Improvement plan and budget

Strategic plan

A strategic plan for the improvement of CRVS systems has not been developed.

Budgetary allocations and requirements

Information on budgetary requirement and allocations was not available

Activities identified as high priorities

Information was not available as a strategic plan for the improvement of CRVS systems is yet to be developed.
Proposals to improve coordination

**National CRVS stakeholders**

Coordination and collaboration among key stakeholders is a necessary condition for the improvement of CRVS systems in any country. NIRA has provided the following recommendations to achieve better coordination among key stakeholders at the national level.

a. Regular scheduled meetings that ensure the progress of civil registration in the country is monitored with the necessary follow up actions taken by the various stakeholders;

b. Develop a Joint Work Plan to give guidance and direction to the Coordination Team; and

c. Stakeholder mapping and defining roles.

**National institutes and development partners**

NIRA has made the following proposals to enhance effective coordination between key national CRVS stakeholders and development partners at the national level.

a. All development partner funding to be in line with a CRVS strategic plan as well as the National Development Plan;

b. Annual review of an integrated work plan and budget of CRVS stakeholders and development partners to avoid duplication and ensure optimal resource use;

c. An efficient and effective National Task Force that represents all development partners and CRVS stakeholders

Conclusion

Uganda has restructured its civil registration system under the Registration of Persons Act 2015. The Act brings together registration of births and deaths and national identification system under NIRA. Under this Act, Uganda has introduced the unique national identification number (NIN) which is shared by the national identification card and recorded on birth registers and certificates.

Uganda has been at the forefront in Africa in implementing mobile technology for the notification of births since 2013, in collaboration with development partners such as UNICEF. This and the role of health facilities have contributed to an improved registration coverage. The link between civil registration and vital statistics systems is weak at this stage. The United Nations emphasizes that the statistical recording and reporting of vital events information irrespective of either the degree of completeness of registration coverage or the extent of data available. The 2015 Act requires that medical officers complete certificate of cause of death. However, Uganda has yet to strengthen the collection of information and reporting of causes of death. In the Uganda One Health Strategic Plan, 2018-2022, there is no mention of collaboration with NIRA on registration of vital events nor with UBOS on sharing of data—therefore, there is need to coordinate activities and set interface among these key stakeholders.

In 2012, the Second conference of Ministers responsible for Civil Registration recommended that all countries conduct a comprehensive assessment and develop strategic plan to improve their CRVS systems. Uganda has completed a baseline survey on CRVS and is yet to prepare a national CRVS strategic plan.
Endnotes

4. Birth or death registration completeness means the actual number of registered births or deaths divided by the estimated number of births or deaths in a particular country or area, in a specified time period usually a year. For further reading refer to ECA, ESCAP and Statistics Norway (2016).

6. DPT1: Surviving infants who received the first dose of diphtheria, pertussis and tetanus (DPT) vaccine.
